

Coroplast®

Coroplast® Stock Sheets

Many standard colors and sizes are available. Custom colors are available by quote.

Coroplast® is the material of choice for today's screen printing industry. Coroplast is ideal for indoor and outdoor applications. It is tougher than corrugated fiberboard and lighter than extruded plastic sheet. It is waterproof and stain-resistant.

All Coroplast stock sheets are electrostatically double treated by "Corona Discharge" on both sides to allow specifically formulated inks and adhesives to adhere.

Coroplast® Custom Sheets

Non-stock, Custom Coroplast® sheets have a 5,000 sq ft minimum order per Part Number.

All Coroplast sheets 12mm and under are electrostatically double treated by "Corona Discharge" on both sides to allow specifically formulated inks and adhesives to adhere. We do not recommend UV printing on Coroplast material that is less than 4mm in thickness.

Enter your specifications to add custom sheets to a quote request. Length represents the length of corrugation and follows the flute; width determines the number of flutes. Orders over 35,000 sq ft may qualify for free freight.

Stock Colors

White, Black, Yellow, Blue, Green, Natural, Granby Blue, and JM Gray.

Non-Standard Colors

Brown, Ivory, Orange, Red, Navy, and Silver

Custom Colors

Purple
